EDUCATION

University of Texas - Dallas
Master's, Data Science

January 2023 - December 2025
GPA: 3.81

Bellevue College
Bachelor's, Data Science

July 2020 - December 2022
GPA: 3.8

Cascadia College
Associate's, Computer Science

August 2018 - March 2020
GPA: 3.9

PROFESSIONAL EXPERIENCE

LatentView Analytics
Data Analyst

Mountain View, CA, USA
January 2026 - Present

- Drove the development of interactive dashboards in Superset, enhancing data visualization and enabling compliance with reporting frameworks for improved decision-making.
- Conducted thorough data analysis using Python, Pandas, and NumPy, translating complex datasets into actionable insights while maintaining stringent data quality standards.
- Implemented Git for version control in collaborative projects, ensuring compliance with data quality assurance processes and enhancing the accuracy of analytics workflows.
- Utilized spaCy and Hugging Face Transformers to clean and analyze diverse data sources, optimizing recruitment processes and reinforcing a commitment to robust data analysis.

VROOM
Data Scientist Intern

Dallas, TX, USA
May 2021 - August 2021

- Drove impactful data visualization initiatives by developing interactive Power BI dashboards, facilitating data-driven decision-making for cross-functional teams.
- Utilized advanced Excel functionalities to streamline data analysis processes, enhancing reporting accuracy and accessibility for stakeholders.
- Collaborated with cross-functional teams to conduct comprehensive data analysis using SQL and Python, ensuring robust insights and reliable analytics.

PROJECTS & OUTSIDE EXPERIENCE

Real-Time ML Deployment Cloud Data Architecture
Graduate Cloud ML Ops Capstone

January 2025 - May 2025

- Launched a REST API for a scikit-learn fraud detection model on Azure Kubernetes Service using Docker, increasing model accessibility and driving a 30% improvement in data transformation efficiency.
- Designed and implemented automated data pipelines in Azure ML Studio, streamlining ETL processes and achieving a 25% reduction in model training time while enhancing quality assurance protocols.
- Architected a robust and scalable data framework on AWS leveraging S3, Glue, and Redshift Spectrum, enabling rapid data retrieval that supported analytics initiatives across multiple departments.
- Engineered a high-performance PySpark ETL pipeline that accelerated data transformation, optimizing data flow management and reducing processing times by 20%.

Sales Forecasting and Product Recommendation Engine
Undergrad Capstone project

January 2022 - May 2022

- Led advanced statistical analyses using R, generating forecasting insights that influenced product recommendations for USC, driving a notable increase in user engagement.
- Conducted in-depth data analysis with SPSS, providing strategic insights that enhanced portfolio management and user interactions across the USC platform.
- Created interactive data visualizations in Tableau, transforming complex datasets into clear reports that effectively tracked performance metrics for USC projects.

Risk Dashboards for COVID-19
Kaggle Hackathon Project

August 2020 - December 2020

- Designed and developed interactive risk dashboards leveraging Tableau and Plotly, enabling stakeholders to visualize and interpret complex COVID-19 data trends effectively.
- Harnessed Looker for in-depth data analysis, transforming raw carbon data into intuitive visualizations that drove strategic insights for workforce management.
- Applied logistic regression modeling to time-series data, revealing critical insights that shaped workforce strategies and responses during the COVID-19 pandemic.
- Crafted compelling data narratives for stakeholders, demonstrating the effects of COVID-19 on workforce dynamics and facilitating informed policy adjustments based on analysis.

Churn Modeling and Explainable ML for Customer Retention
Masters Final Project

August 2024 - December 2025

- Spearheaded the development of an advanced Random Forest model, utilizing innovative feature engineering on CRM data to enhance project management of customer retention strategies.
- Employed SHAP values to elucidate the key drivers of customer churn, enriching project management efforts through actionable insights into user behavior and retention.
- Facilitated collaboration among cross-functional teams to create automated reporting tools, streamlining project management processes and transforming complex data into accessible insights that support retention initiatives.

SKILLS

Skills: Python, SQL, R, Pandas, NumPy, Scikit-learn, SpaCy, Tensorflow, Keras, Tableau, Power BI, Seaborn, AWS, Docker, MySQL, Git, Communications, Excel/Numbers/Sheets, MATLAB, PowerBI, Data Anlysis, Analyticsl Skills, Data Obsessesd
